

DESCRIPTION

Interface Casambi to DALI without DALI power - 9,5-22,5Vdc 5mA powered from the DALI bus.

BR-CBU-DCS is a Bluetooth controllable, Casambi enabled DALI controller. CBU-DCS does not have its own power supply. Instead, it is powered directly from a DALI bus.

Can be used with a DALI sensor for presence detection or daylight harvesting, or it can be used for controlling DALI drivers that have an integrated DALI bus power supply. When used with drivers it supports range of options, including Device Type 6, Device Type 8, Tuneable white control and RGB control.

BR-CBU-DCS has two sets of connectors. These connectors are internally connected in parallel with each other. This way the DALI bus can be routed through the product for easy installation.
