

DESCRIPTION

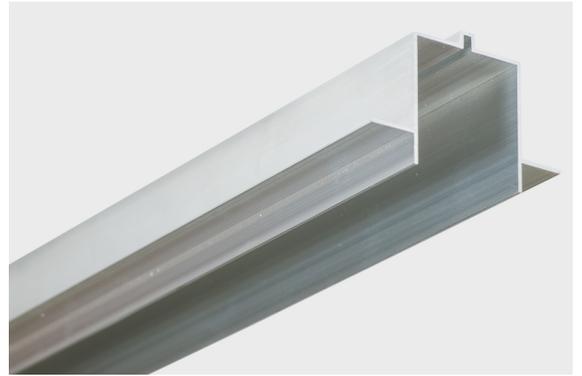

Trimless Fitting is the solution for all customers who seek to construct continuous, embedded and no-trims light lines, a process that is usually quite difficult to achieve. This accessory, suitable for ORIS 50 profile, must be installed while the ceiling is being built and where the LED profile is easily attached, after the finishing and usual procedures. The Trimless Fitting brings huge advantages to lighting since it allows an easy replacement of the LED profile, does not change the room aesthetics, dismissing the usual trims, and maintains the technical features of the luminaire.

Length: 2000mm

Width: 92.7mm

Height: 63.5mm

Flap height: 13mm
